

ABOUT

When Alfred Fain founded a small Rhode Island tire store in 1924, at the time no one could have predicted how Teknor Apex would become an international custom compounder sought out by companies around the world. After a nearly hundred-year journey that's carried us through acquisitions and expansion, we now have nine U.S. locations, as well as operations in Belgium, Singapore, Germany, and China.

The St Albans plant produces TPE resins that are used in products you see and touch daily including Apple ear bud cords, Rubbermaid lids, Snapware lids, Oral B toothbrushes, dog toys and many more. Our small team prides itself on our ability to react quickly to our customer needs with high quality products.
